

Anyone can get Hepatitis B.

A few simple shots can prevent it.

Why risk it?

Hepatitis B is a very serious disease.

- The hepatitis B virus attacks the liver and can lead to death.
- Each year in the U.S., about 80,000 people, mostly young adults, get infected with the hepatitis B virus.

Hepatitis B is very contagious.

- It is spread through contact with blood and body fluids of an infected person.
- 1 in 3 people who get hepatitis B don't know how they got it. Some don't even know they have it.

Hepatitis B can be prevented.

- Hepatitis B vaccine is one of the safest and most effective vaccines in the world.
- A simple 3-shot series can protect you.

You decide.
